ROHS Compliance Plan

1.0 General

RoHS and other legislation has been enacted restricting the use of certain materials that are considered to be hazardous. The European Union Directive scheduled to be implemented July 1st, 2006, prohibits the use of lead (Pb), Cadmium (Cd), Hexavalent Chromium (CrVI), Mercury (Hg), Polybrominated biphenyls (PBB) and Polybrominated diphenyl ethers (PBDE).

2.0 Applicability

Micro-Tronics provides passive components for commercial and military products. It is the *customer's responsibility* to request RoHS compliance either on a specific product or generalized basis. Some of our military customers demand that we do not use lead free solder. Micro-Tronics must be notified of the requirement prior to the acceptance of a purchase order. Some cost and/or delivery impact for implementation may be applicable.

3.0 Compliance

Micro-Tronics products have typically been free of the prohibited substances listed with the exception of lead as a solder component and cadmium in some chip capacitors. RoHS compliant products will use lead free solder and the prohibited substances will continue to be absent. RoHS compliant parts will have the letter "G" added in front of the serial number, e.g., G247. In the event a customer wishes to have a new part number assigned to differentiate between compliant and non-compliant parts, Micro-Tronics will provide a new part number.

4.0 Additional information

Requests for additional information should be e-mailed to sales@micro-tronics.net.
